

Ministry Resource Partners

Partners help with content, tools, field support, nonprofit sourcing, and ministry credibility.

PARTNERS RECEIVING RESOURCES

Plain answer

VillageServer should not pretend to do everything alone. The work is stronger when trusted partners provide content, relationships, hardware support, or field feedback.

Field steps

01

Name the need

Decide whether the gap is content, hardware, field access, training, nonprofit support, or translation.

02

Match the partner

Use the VillageServer Initiative team, Digital Bible Society, TechSoup, and regional ministry partners where they fit.

03

Request clearly

Ask for the specific resource, license permission, discount, or relationship support needed.

04

Credit properly

Keep partner names and content permissions visible and accurate.

05

Review annually

Update partner information as the initiative grows.

FIELD PROMISE

Partners should make the work easier to trust, easier to source, and easier to repeat in the field.

Quick board summary

PARTNERS RECEIVING RESOURCES

01

VillageServer Initiative

Field kit design, training path, and offline access workflow.

02

Digital Bible Society

Digital Bible resources and library support.

03

TechSoup

Discounted nonprofit technology and hardware sourcing help.

04

Regional partners

Local churches and ministries help test, translate, train, and report.

REMEMBER

Keep partner information current. The board should see who supports the work and what each relationship actually provides.
